A	System Workflow	9

1 Introduction

Humans are inherently social: we build relationships, coordinate collective action, and solve problems through discussion. Yet in many contemporary settings, public discourse is increasingly polarized, and disagreement often escalates rather than producing workable outcomes. For complex social problems—where no single “correct” answer follows from a formula and where judgments can appear biased depending on perspective—structured deliberation offers a practical way to reach decisions that participants can accept or, at minimum, tolerate. Developing tools that help translate deliberative practices into real-world contexts can therefore strengthen the quality and accessibility of civic discussion.

Formal deliberation—including parliamentary procedure, committee negotiation, and resolution drafting—is central to policy education and professional policy practice. However, deliberation exercises such as Model United Nations (MUN) often face recurring limitations: inconsistent enforcement of procedure, uneven turn-taking, limited traceability of decisions, complex rules that can overwhelm newcomers, and high facilitation overhead for chairs.

To address these challenges, we are developing d|alogüe., a digital platform that supports structured formal discussion in ways that mirror institutional practice (e.g., committee sessions, moderated floor debates, amendment cycles, and voting). The system is designed to improve procedural clarity, transparency, and the usability of formal meeting workflows, particularly for users who are likely to engage with governance processes in their future careers. Ultimately, d|alogüe. aims to serve as a practical platform for inclusive, well-moderated deliberation that helps groups converge on solutions that are broadly acceptable—or at least tolerable—to participants.

2 Platform Overview

d|alogüe. is a web-based platform that facilitates moderated, formal discussion sessions. It is designed around roles and procedural states commonly found in institutional deliberation, such as the United Nations. Key capabilities include:

- **Role-based participation and moderation:** e.g., President, Chairs, Members, invited speakers; role-appropriate permissions and UI views,
- **Structured floor workflows:** mechanisms to manage the floor, formal interventions, and agenda progression,
- **Document-centered deliberation:** participants view and work from shared texts, enabling traceable edits and discussion anchored to specific clauses,
- **Amendment and revision workflow:** structured proposal of edits, with linkage to discussion and decision outcomes,

Figure 1: Name, Logo, and Logo Anatomy of the System

- **Decision checkpoints:** configurable decision moments, with loggable outcomes, and
- **Assistive features:** supportive tools such as drafting assistance, summarization, or translation features are available.

From an implementation standpoint, the platform is built as a modern web application with a modular architecture suitable for iterative improvement based on user feedback.

Figure 2: Platform Workflow

The workflow of this system can be described in Fig. 2 for the purpose of simplicity. For your edification, it is further explained as follows:

- Step 1:** *Agenda items* for an event are proposed by users and subsequently reviewed by the chairs and the president. Accepted *agenda items* will be published beforehand to all users so that they can prepare for the event.
- Step 2:** The *general floor* of an event is used to discuss the accepted *agenda items*. During this stage, users are expected to engage in formal discussion in accordance with United Nations practice, including speaker list registration and the right of reply, under the moderation of the chair.
- Step 3:** In parallel, the *proposal discussion* stage allows users to create discussion rooms where they may deliberate with one another without the supervision of the chair

and develop a *draft proposal*. The *draft proposal* remains editable and open for sponsorship until it is submitted to the system, after which it will be processed for public viewing.

Step 4: During the public viewing stage, users may propose *amendments* to submitted drafts and may also become late sponsors of a draft.

Step 5: On the *proposal floor*, users are expected to discuss submitted proposals under the moderation of the chair. Original sponsors may briefly explain their proposals, while other users may express support or concerns. Most importantly, this is the stage during which voting, if any, takes place.

Step 6: The voting record and final decision will be published to users for transparency and accountability.

For further information, please refer to the full workflow shown in Appendix A.

3 How-To Guide

(For a more detailed interactive guide, please visit [URL]; this guide will omit any features inaccessible to the general public (i.e., please visit the URL for how-to guides on features related to other roles))

Question 1: How to propose an agenda item?

The screenshot shows a web browser window with the URL 'localhost'. The page title is 'Propose Agenda Item' and the subtitle is 'AI Governance and Data Sovereignty: Balancing Innovation, Rights, and State Capacity'. A green notification bar at the top states 'Proposal submitted. The president will review it.' The form contains the following fields and text:

- Agenda title ***: Public-sector procurement, implementation capacity, and citizen trust
- Background / Rationale ***: Even strong AI rules fail if governments lack the capacity to buy, deploy, and supervise systems well. OECD work highlights that governments are already using AI in public service design and delivery, and that AI in public procurement can improve monitoring and transparency—but only when institutions have the skills, documentation practices, and review mechanisms to manage risk. This makes procurement and administrative readiness a crucial agenda item: the meeting could discuss vendor standards, procurement safeguards, civil-service AI literacy, independent review, and post-deployment monitoring so that adoption does not outrun accountability.
- URL Source (optional)**: <https://example.org/report-or-press-release>
If provided, include a credible reference or primary source.
- ☐ Submit anonymously
- Submit proposal** button

Below the form, there is a section titled 'My proposals for this event' showing a list of proposals. The first proposal is 'Defining high-risk AI uses and the accountability framework' with a status of 'Pending' and a submission time of 'Submitted 2026-02-26 09:07 UTC'.

Figure 3: Agenda Item Proposal

Agenda items can be proposed to the system for review by going to the **Agenda Proposal** menu within an event. Users are encouraged to submit topics they would like to discuss during the event. Proposals can be submitted anonymously. To ensure that users have time to prepare for the event, this stage closes a few days in advance so that the chairs and president can review the submissions and publish the accepted items in a timely manner. The accepted items can be viewed in the **View Agenda** section of the event.

Question 2: How to engage during the event?

At the start of the event, general discussion will take place in the **General Floor**. There will be one general floor for each accepted agenda item. The discussion will begin with the first item on the list.

Figure 4: General Floor

Help 1: How do I request to speak?

Requesting to speak is known as *requesting the floor*. This is meant to keep the discussion orderly so that users can hear what others have to say without the confusion of everyone talking at once. To secure a chance to speak, users must request the floor. The moderator may then close the list once all speaking slots are filled and manage the speaker list accordingly. When your turn comes, you will be notified and the posting field will open. You may also withdraw your request at any time.

Help 2: How do I reply to a thread?

Replying to a thread also requires requesting the floor and is known as the *right to reply*. To do so, click the reply button under the thread you would like to respond to. Afterwards, you will need to wait for your turn.

Help 3: I received an invitation from the chair, what do I do?

When you receive a notification from the chair inviting you to the floor, it means that the chair believes a thread is relevant to you and requires your response. In that case, the chair may send you an invitation, which you may accept or decline. If you accept, you will need to wait for your turn.

Question 3: How do I discuss a possible solution to an agenda with others?

The purpose of this event is to find possible solutions to the items being discussed. To achieve this, participants should first be able to discuss ideas with one another. You can do so by going to **Proposal Discussion** at any time before the **Proposal Floor** stage opens. There, you can join discussion rooms created by others or create one yourself. Afterwards, you can use the message board to discuss the proposal together. However, only the room creator can interact with the drafting process to prevent conflicts.

Figure 5: Proposal Discussion Room

Help 1: I don't understand this complicated template of draft, what do I do?

The system is designed to make formal proceedings more accessible to non-experts. Room owners can simply provide their draft in paragraph form, click **generate draft from paragraph**, and let the system fill in the template automatically. They can still revise the draft in the template afterward if needed.

Help 2: I can't see the draft; How do I share the draft with others before submission?

To make the draft visible to everyone in the room, the room owner must save it.

Help 3: Can I edit the draft?

Yes, you can edit the draft even after saving, as long as you are the room owner and do so before submission.

Help 4: How do I sponsor this draft?

If you agree with a draft and would like to sponsor it before submission, click **co-sign** before the draft is submitted. You can also withdraw your endorsement.

Help 5: How do I submit the draft?

You can simply do so by clicking on **submit draft**. Please be aware that doing so will close the drafting process on that draft.

Question 4: How do I view all submitted drafts?

Submitted drafts are known as *tabled drafts*. You can view them in **View Tabled Draft Resolution Text**, where translations are available in five other languages (Chinese, Russian, French, Spanish, and Arabic). You can also find the **Amendment** menu on this page.

The screenshot displays the 'djalogue' web application interface. At the top, there's a navigation bar with a 'Private' toggle, a browser address bar showing 'localhost', and user information 'hi, @chairman' with links to 'Dashboard', 'Logout', and 'Admin'. The main content area is titled 'Agenda item: Cross-border data flows and data sovereignty' with a 'Resolution number: A/2026/8/L.2'. Below this, a text box prompts the user to 'Describe your amendment (plain paragraphs)'. A 'Generate amendment operations' button is present, with a tip: 'Tip: If you know clause numbers, include them (e.g., "replace operative 4(a)..."). Otherwise describe by "starting with..."'. The interface shows a list of amendment operations, each with a dropdown menu (ADD, REPLACE, REMOVE), a text input for the clause, and a 'Remove' button. The operations listed are: 'as new operative clause' (data-localization or transfer restrictions are not applied too broadly), 'operative clause starting with "Encoura"' (periodic review, independent oversight, and transparent appeals procedures), 'operative clause starting with "Localiza"' (Text to ADD / replacement; leave blank to remove whole target.), and 'as new operative clause' (support for technical assistance and capacity-building so that developing...). At the bottom, there are 'Add operation' and 'Submit Amendment' buttons.

Figure 6: Amendment Feature

Help 1: Can I withdraw my tabled draft?

Yes, as long as you are the main sponsor of the draft, that is, the room owner. Doing so will remove your draft from consideration, but it may still be reintroduced by others.

Help 2: I didn't have a chance to sponsor this draft, can I still do it?

Yes, you can sponsor a draft until the **Proposal Floor** stage opens. However, you will be listed as a late sponsor, so you will not be able to introduce the draft during the floor.

Help 3: Can I propose amendments to this draft?

Yes. Amendments consist of three types: replace, add, and remove. You can create them by filling in the template directly or by following a process similar to drafting, where you submit a paragraph and let the system convert it into the template. As before, you can still revise the output before submitting it. Submitted amendments can be viewed by others and will be subject to voting during the floor.

Question 5: How is consensus achieved on each agenda item?

The main goal of this system is to achieve consensus whenever possible. This stage takes place in the **Proposal Floor**, which has a layout similar to the **General Floor**.

Help 1: I received an invitation to introduce our proposal, what do I do?

At the beginning of the discussion, the chair will invite the original sponsors to briefly introduce the proposal. The invitation will be sent to all original sponsors, so it is best for them to decide in advance who will represent the group, while the others decline the invitation.

Help 2: What is early vote?

An early vote is used to determine whether consensus can be achieved. Consensus is reached if no one votes no. If any participant votes no, a formal vote will be held instead.

Help 3: How is formal vote counted?

A formal vote is decided by a simple majority. If there is a tie, the proposal is rejected.

Help 4: How can we see the final result of the event?

You can find the final results in **Decision**. The details are listed there.
